# Working method :
For our work strategy, we adopted the Kanban method and decided that each member of our group were in charge of one SAE.

# Different steps :
Thomas deployed several applications within the team those application were : Trello, Notion, GitHub and Discord.

As each activity had a different deadlines, we started as the 25th April with the first activity that had to be sent before the 6th May. At this date we pursued with the third activity that had to be sent before the 20th May. In the meantime we worked on the 5th activity that was due the 27th May. We started the second activity as the same time as the first one and kept working on it until the final sending, the 7th June.

# Positive points :
We managed to work on every activities without any conflict within the group, the team's atmosphere was professional and constructive, but also very friendly.

# Analysis of our work as a team :
Globally we are satisfied with our work and the productivity we demonstrated.

# Negative points and the solutions we found :
The first difficulty was about the Trello's general organization, and Mr Mahric gave us great advices to do it the right way.
